

Topic/Skill	Definition/Tips	Example															
7.1 Quadrilaterals	Classify quadrilaterals by their geometric properties. Solve problems using side and angle properties of special quadrilaterals.	<p>Key point A diagonal is a line that joins two opposite vertices of a shape. When diagonals bisect each other, they cut each other in half. The properties of a shape are facts about its side, angles, diagonals and symmetry. Here are some of the properties of the special quadrilaterals that you should know.</p> <table border="1" data-bbox="718 391 1831 939"> <tbody> <tr> <td data-bbox="718 391 846 545"> Square  </td> <td data-bbox="846 391 1253 545"> <ul style="list-style-type: none"> All sides are equal in length Opposite sides are parallel All angles are 90° Diagonals bisect each other at 90° </td> <td data-bbox="1253 391 1406 545"> Rectangle  </td> <td data-bbox="1406 391 1831 545"> <ul style="list-style-type: none"> Opposite sides are equal in length Opposite sides are parallel All angles are 90° Diagonals bisect each other </td> </tr> <tr> <td data-bbox="718 545 846 715"> Rhombus  </td> <td data-bbox="846 545 1253 715"> <ul style="list-style-type: none"> All sides are equal in length Opposite sides are parallel Opposite angles are equal Diagonals bisect each other at 90° </td> <td data-bbox="1253 545 1406 715"> Parallelogram  </td> <td data-bbox="1406 545 1831 715"> <ul style="list-style-type: none"> Opposite sides are equal in length Opposite sides are parallel Opposite angles are equal Diagonals bisect each other </td> </tr> <tr> <td data-bbox="718 715 846 939"> Kite  </td> <td data-bbox="846 715 1253 939"> <ul style="list-style-type: none"> 2 pairs of sides are equal in length No parallel sides 1 pair of equal angles Diagonals bisect each other at 90° </td> <td data-bbox="1253 715 1406 801"> Trapezium  </td> <td data-bbox="1406 715 1831 801"> <ul style="list-style-type: none"> 1 pair of parallel sides </td> </tr> <tr> <td data-bbox="718 801 1253 939"></td> <td data-bbox="1253 801 1406 939"> Isosceles trapezium  </td> <td data-bbox="1406 801 1831 939"> <ul style="list-style-type: none"> 2 sides are equal in length 1 pair of parallel sides 2 pairs of equal angles </td> </tr> </tbody> </table> <p>Worked example</p> <p>In this parallelogram, one of the angles is 55°. Work out the sizes of the other angles.</p>  <p> $x = 55^\circ$ (opposite angles of a parallelogram are equal) $360 - 55 - 55 = 250^\circ$ (angles in a quadrilateral add up to 360°) $250 \div 2 = 125^\circ$ (opposite angles of a parallelogram are equal) $y = 125^\circ$ and $z = 125^\circ$ </p> <p>Identify equal angles. Write the reason</p>	Square 	<ul style="list-style-type: none"> All sides are equal in length Opposite sides are parallel All angles are 90° Diagonals bisect each other at 90° 	Rectangle 	<ul style="list-style-type: none"> Opposite sides are equal in length Opposite sides are parallel All angles are 90° Diagonals bisect each other 	Rhombus 	<ul style="list-style-type: none"> All sides are equal in length Opposite sides are parallel Opposite angles are equal Diagonals bisect each other at 90° 	Parallelogram 	<ul style="list-style-type: none"> Opposite sides are equal in length Opposite sides are parallel Opposite angles are equal Diagonals bisect each other 	Kite 	<ul style="list-style-type: none"> 2 pairs of sides are equal in length No parallel sides 1 pair of equal angles Diagonals bisect each other at 90° 	Trapezium 	<ul style="list-style-type: none"> 1 pair of parallel sides 		Isosceles trapezium 	<ul style="list-style-type: none"> 2 sides are equal in length 1 pair of parallel sides 2 pairs of equal angles
Square 	<ul style="list-style-type: none"> All sides are equal in length Opposite sides are parallel All angles are 90° Diagonals bisect each other at 90° 	Rectangle 	<ul style="list-style-type: none"> Opposite sides are equal in length Opposite sides are parallel All angles are 90° Diagonals bisect each other 														
Rhombus 	<ul style="list-style-type: none"> All sides are equal in length Opposite sides are parallel Opposite angles are equal Diagonals bisect each other at 90° 	Parallelogram 	<ul style="list-style-type: none"> Opposite sides are equal in length Opposite sides are parallel Opposite angles are equal Diagonals bisect each other 														
Kite 	<ul style="list-style-type: none"> 2 pairs of sides are equal in length No parallel sides 1 pair of equal angles Diagonals bisect each other at 90° 	Trapezium 	<ul style="list-style-type: none"> 1 pair of parallel sides 														
	Isosceles trapezium 	<ul style="list-style-type: none"> 2 sides are equal in length 1 pair of parallel sides 2 pairs of equal angles 															

<p>7.2 Alternate angles and proof</p>	<p>Identify alternate angles on a diagram. Understand proofs of angle facts</p>	<p>Key point When a line crosses two parallel lines it creates a 'Z' shape. Inside the Z shape are alternate angles. Alternate angles are equal. Alternate angles are on different (alternate) side of the diagonal line</p>  <p>Worked example</p>  <p>Write the sizes of angles x and y. Give reasons for you answers</p> <p>$X = 72^\circ$ (alternate angle with 72°) $Y = 180 - 72 = 108^\circ$ (angles on a straight line add up to 180°)</p> 
<p>7.3 Angles in parallel lines</p>	<p>Identify corresponding angles. Solve problems using properties of angles in parallel and intersecting lines</p>	<p>Key point When a line crosses two parallel lines it creates an 'F' shape. There are corresponding angles on an F shape. Corresponding angles are equal. Corresponding angles are on the same (corresponding) side of the diagonal line.</p>  <p>Worked example</p>  <p>Write the sizes of angles x, y and z. Give reasons for you answers</p> <p>$X = 180 - 105 = 75^\circ$ (angles on a straight line add up to 180°) $Y = 105^\circ$ (corresponding angle with 105°) $Z = 75^\circ$ (corresponding angle with x)</p> 
<p>7.4 Exterior and interior angles</p>	<p>Calculate the sum of the interior and exterior angles of a polygon</p>	<p>Key point The interior and exterior angles of a polygon as shown in the diagram.</p> <p>In an irregular polygon sides are not all equal lengths, and angles are not all equal</p> 

Topic/Skill	Definition/Tips	Example			
7.4 Exterior and interior angles	Work out the sizes of interior and exterior angles of a polygon	Sum of interior angles	$(n - 2) \times 180$ Where n is the number of sides		
		Size of interior angle in regular polygon	$\frac{(n - 2) \times 180}{n}$ You can also use the formula; <i>180 – size of exterior angle</i>		
		Size of exterior angle in a regular polygon	$\frac{360}{n}$ You can also use the formula: <i>180 – size of interior angle</i>		
		<div style="background-color: #fff9c4; padding: 10px;"> <p>Key point</p> <p>The angles in a quadrilateral add up to 360° $a + b + c + d = 360^\circ$</p>  </div> <div style="background-color: #4a7ebb; color: white; padding: 5px; margin-top: 5px;">Key point 6</div> <div style="background-color: #fff9c4; padding: 10px; margin-top: 5px;"> <p>The sum of the exterior angles of a regular polygon is always 360°</p> </div>			
7.5 Solving geometric problems	Solve geometrical problems	<p>1 For each irregular polygon, work out</p> <ol style="list-style-type: none"> the sum of the interior angles the size of the angle marked with a letter <div style="display: flex; justify-content: space-around; align-items: flex-start;"> <div style="text-align: center;">  <p>a i 360° ii $x = 163^\circ$</p> </div> <div style="text-align: center;">  <p>b i 540° ii $y = 160^\circ$</p> </div> <div style="text-align: center;">  <p>c i 720° ii $z = 129^\circ$</p> </div> </div> <p>2a For each polygon, work out the size of each exterior angle, and then the sum of exterior angles</p> <div style="display: flex; justify-content: space-around; align-items: flex-start;"> <div style="text-align: center;">  </div> <div style="text-align: center;">  </div> </div> <div style="display: flex; justify-content: space-around; align-items: flex-start; margin-top: 20px;"> <div style="text-align: center;">  </div> <div style="text-align: center;">  </div> </div> <p>2b Reasoning What do you notice about the sum of the exterior angles for each shape?</p> <table style="width: 100%; border: none;"> <tr> <td style="width: 50%; vertical-align: top;"> <p>i $a = b = c = d = 90^\circ$ sum = 360°</p> <p>ii $e = 75^\circ, f = 45^\circ, g = 113^\circ, h = 40^\circ, i = 87^\circ$ sum = 360°</p> </td> <td style="width: 50%; vertical-align: top;"> <p>iii $j = 60^\circ, k = 85^\circ, l = 53^\circ, m = 38^\circ, n = 109^\circ, p = 15^\circ$ sum = 360°</p> <p>iv $q = 100^\circ, r = s = 130^\circ$ sum = 360°</p> </td> </tr> </table>		<p>i $a = b = c = d = 90^\circ$ sum = 360°</p> <p>ii $e = 75^\circ, f = 45^\circ, g = 113^\circ, h = 40^\circ, i = 87^\circ$ sum = 360°</p>	<p>iii $j = 60^\circ, k = 85^\circ, l = 53^\circ, m = 38^\circ, n = 109^\circ, p = 15^\circ$ sum = 360°</p> <p>iv $q = 100^\circ, r = s = 130^\circ$ sum = 360°</p>
<p>i $a = b = c = d = 90^\circ$ sum = 360°</p> <p>ii $e = 75^\circ, f = 45^\circ, g = 113^\circ, h = 40^\circ, i = 87^\circ$ sum = 360°</p>	<p>iii $j = 60^\circ, k = 85^\circ, l = 53^\circ, m = 38^\circ, n = 109^\circ, p = 15^\circ$ sum = 360°</p> <p>iv $q = 100^\circ, r = s = 130^\circ$ sum = 360°</p>				

Try these . . .

1. Write which quadrilaterals

- | | |
|--|--|
| a have all sides equal | b have four right angles |
| c have two pairs of equal sides | d have exactly one pair of parallel sides |
| e have bisecting diagonals | f can have four different sized angles |

2. In this parallelogram, one of the angles is 130° . Work out the sizes of the other angles

Work out the sizes of the angles marked with letters in this isosceles trapezium

Work out the sizes of the angles marked with letters in the is kite

3. Reasoning: Write the sizes of the angles marked with letters
Give a reason for each answer

4. Work out the missing exterior angles of these polygons
