

Topic/Skill	Definition/Tips	Example																				
1. Types of Data	<p>Qualitative Data – non-numerical data Quantitative Data – numerical data</p> <p>Continuous Data – data that can take any numerical value within a given range. Discrete Data – data that can take only specific values within a given range.</p>	<p>Qualitative Data – eye colour, gender etc.</p> <p>Continuous Data – weight, voltage etc.</p> <p>Discrete Data – number of children, shoe size etc.</p>																				
2. Grouped Data	<p>Data that has been bundled in to categories.</p> <p>Seen in grouped frequency tables, histograms, cumulative frequency etc.</p>	<table border="1"> <thead> <tr> <th>Foot length, l, (cm)</th> <th>Number of children</th> </tr> </thead> <tbody> <tr> <td>$10 \leq l < 12$</td> <td>5</td> </tr> <tr> <td>$12 \leq l < 17$</td> <td>53</td> </tr> </tbody> </table>	Foot length, l , (cm)	Number of children	$10 \leq l < 12$	5	$12 \leq l < 17$	53														
Foot length, l , (cm)	Number of children																					
$10 \leq l < 12$	5																					
$12 \leq l < 17$	53																					
3. Primary /Secondary Data	<p>Primary Data – collected yourself for a specific purpose.</p> <p>Secondary Data – collected by someone else for another purpose.</p>	<p>Primary Data – data collected by a student for their own research project.</p> <p>Secondary Data – Census data used to analyse link between education and earnings.</p>																				
4. Mean	<p>Add up the values and divide by how many values there are.</p>	<p>The mean of 3, 4, 7, 6, 0, 4, 6 is</p> $\frac{3 + 4 + 7 + 6 + 0 + 4 + 6}{7} = 5$																				
5. Mean from a Table	<ol style="list-style-type: none"> Find the midpoints (if necessary) Multiply Frequency by values or midpoints Add up these values Divide this total by the Total Frequency <p>If grouped data is used, the answer will be an estimate.</p>	<table border="1"> <thead> <tr> <th>Height in cm</th> <th>Frequency</th> <th>Midpoint</th> <th>F × M</th> </tr> </thead> <tbody> <tr> <td>$0 < h \leq 10$</td> <td>8</td> <td>5</td> <td>$8 \times 5 = 40$</td> </tr> <tr> <td>$10 < h \leq 30$</td> <td>10</td> <td>20</td> <td>$10 \times 20 = 200$</td> </tr> <tr> <td>$30 < h \leq 40$</td> <td>6</td> <td>35</td> <td>$6 \times 35 = 210$</td> </tr> <tr> <td>Total</td> <td>24</td> <td>frequency!</td> <td>450</td> </tr> </tbody> </table> <p>Estimated Mean height: $450 \div 24 = 18.75\text{cm}$</p>	Height in cm	Frequency	Midpoint	F × M	$0 < h \leq 10$	8	5	$8 \times 5 = 40$	$10 < h \leq 30$	10	20	$10 \times 20 = 200$	$30 < h \leq 40$	6	35	$6 \times 35 = 210$	Total	24	frequency!	450
Height in cm	Frequency	Midpoint	F × M																			
$0 < h \leq 10$	8	5	$8 \times 5 = 40$																			
$10 < h \leq 30$	10	20	$10 \times 20 = 200$																			
$30 < h \leq 40$	6	35	$6 \times 35 = 210$																			
Total	24	frequency!	450																			
6. Median Value	<p>The middle value.</p> <p>Put the data in order and find the middle one.</p> <p>If there are two middle values, find the number half way between them by adding them together and dividing by 2.</p>	<p>Find the median of: 4, 5, 2, 3, 6, 7, 6</p> <p>Ordered: 2, 3, 4, 5, 6, 6, 7</p> <p>Median = 5</p>																				
7. Median from a Table	<p>Use the formula $\frac{(n+1)}{2}$ to find the position of the median.</p> <p>n is the total frequency.</p>	<p>If the total frequency is 15, the median will be the $\left(\frac{15+1}{2}\right) = 8\text{th}$ position</p>																				
8. Mode /Modal Value	<p>Most frequent/common.</p> <p>Can have more than one mode (called bi-modal or multi-modal) or no mode (if all values appear once)</p>	<p>Find the mode: 4, 5, 2, 3, 6, 4, 7, 8, 4</p> <p>Mode = 4</p>																				
9. Range	<p>Highest value subtract the Smallest value Range is a 'measure of spread'. The smaller the range the more consistent the data.</p>	<p>Find the range: 3, 31, 26, 102, 37, 97.</p> <p>Range = $102 - 3 = 99$</p>																				

10. Outlier	A value that 'lies outside' most of the other values in a set of data. An outlier is much smaller or much larger than the other values in a set of data.	
11. Lower Quartile	Divides the bottom half of the data into two halves . $LQ = Q_1 = \frac{(n+1)}{4} \text{th value}$	Find the lower quartile of: 2, 3, 4, 5, 6, 6, 7 $Q_1 = \frac{(7+1)}{4} = 2\text{nd value} \rightarrow 3$
12. Lower Quartile	Divides the top half of the data into two halves . $UQ = Q_3 = \frac{3(n+1)}{4} \text{th value}$	Find the upper quartile of: 2, 3, 4, 5, 6, 6, 7 $Q_3 = \frac{3(7+1)}{4} = 6\text{th value} \rightarrow 6$
13. Interquartile Range	The difference between the upper quartile and lower quartile . $IQR = Q_3 - Q_1$ The smaller the interquartile range, the more consistent the data .	Find the IQR of: 2, 3, 4, 5, 6, 6, 7 $IQR = Q_3 - Q_1 = 6 - 3 = 3$

Try these

- Here is a list of the numbers of bags some shoppers were carrying when leaving a supermarket.
1 2 5 4 0 5 4
 - Find the median.
 - Work out the mean.
 - Work out the range.
- Here are the lengths of some lines measured with a ruler.
4 cm 7 cm 11 cm 7 cm 1 cm
 - Work out the mean.
 - Work out the range.
- Here are the ages in years of some people in a sports club.
8 12 25 18 30 23 35 33 28 18
9 18 22 10 21 15 29 31 20 23

Complete this grouped frequency table using intervals of equal width.
The first interval has been done for you.

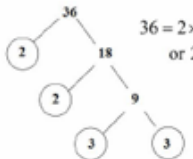

Age (years)	Tally	Frequency
0-9		

- Students in two classes did a test.
The mean for class A was 58 and the range was 28
The mean for class B was 75 and the range was 10
Make two comparisons between class A and Class B.

Topic/Skill	Definition/Tips	Example
1. Integer	A whole number that can be positive, negative or zero.	-3, 0, 92
2. Decimal	A number with a decimal point in it. Can be positive or negative.	3.7, 0.94, -24.07
3. Negative Number	A number that is less than zero . Can be decimals.	-8, -2.5
4. Addition	To find the total , or sum , of two or more numbers. 'add', 'plus', 'sum'	$3 + 2 + 7 = 12$
5. Subtraction	To find the difference between two numbers. To find out how many are left when some are taken away. 'minus', 'take away', 'subtract'	$10 - 3 = 7$
6. Multiplication	Can be thought of as repeated addition . 'multiply', 'times', 'product'	$3 \times 6 = 6 + 6 + 6 = 18$
7. Division	Splitting into equal parts or groups. The process of calculating the number of times one number is contained within another one . 'divide', 'share'	$20 \div 4 = 5$ $\frac{20}{4} = 5$
8. Remainder	The amount ' left over ' after dividing one integer by another.	The remainder of $20 \div 6$ is 2, because 6 divides into 20 exactly 3 times, with 2 left over.
9. Multiple	The result of multiplying a number by an integer. The times tables of a number.	The first five multiples of 7 are: $7, 14, 21, 28, 35$
10. Factor	A number that divides exactly into another number without a remainder. It is useful to write factors in pairs	The factors of 18 are: $1, 2, 3, 6, 9, 18$ The factor pairs of 18 are: $1, 18$ $2, 9$ $3, 6$
11. Lowest Common Multiple (LCM)	The smallest number that is in the times tables of each of the numbers given.	The LCM of 3, 4 and 5 is 60 because it is the smallest number in the 3, 4 and 5 times tables.
12. Highest Common Factor (HCF)	The biggest number that divides exactly into two or more numbers.	The HCF of 6 and 9 is 3 because it is the biggest number that divides into 6 and 9 exactly.

13. Prime Number	<p>A number with exactly two factors.</p> <p>A number that can only be divided by itself and one.</p> <p>The number 1 is not prime, as it only has one factor, not two.</p>	<p>The first ten prime numbers are:</p> <p>2, 3, 5, 7, 11, 13, 17, 19, 23, 29</p>
14. Prime Factor	A factor which is a prime number.	The prime factors of 18 are:
15. Product of Prime Factors	<p>Finding out which prime numbers multiply together to make the original number.</p> <p>Use a prime factor tree.</p> <p>Also known as 'prime factorisation'.</p>	<p>2, 3</p> <p>36 = 2 × 2 × 3 × 3 or 2² × 3²</p> 

Try these

- Find 48×100
- Work out $384 \div 4$
- Work out $\pounds 38 + \pounds 2.16 + 42\text{p}$.
- Write all the factor pairs of 18
- Find the lowest common multiple (LCM) of 15 and 20
- Write down the value of
 - 7^2
 - $\sqrt{100}$
- The height of the highest mountain in Scotland is 1344 metres.
The height of the highest mountain in England is 978 metres.
Work out the difference between these two heights.
- Some of the factors of 182 are prime numbers.
Find one of these numbers.
