

A level Chemistry Summer Task

Research and write a report on a current scientific development that you find interesting (preferably in Chemistry) use a variety of sources (NOT just one googled web page!).

The report should be at least two-three pages long and explain what the development is as well as the science behind it. This will most probably mean you need to do some further research on the science behind the new development. You need to also explain why you think this is both interesting and important to society.

Make sure you reference your source material. Bring the report to the first Chemistry lesson.

Possible sources include The New scientist magazine and web site (part is subscription but main articles are freely accessible), Royal society of chemistry web site, free sections of on line scientific journals.
