

KEY VOCABULARY

Fraction: Part of a whole e.g.

$\frac{3}{4}$ Numerator: how many parts we have.

Denominator: how many equal parts the whole has been divided into.

Unit Fraction: Always has a numerator of 1 e.g. $\frac{1}{2}$ $\frac{1}{3}$ $\frac{1}{17}$

Improper Fraction: Numerator is bigger than the denominator

e.g. $\frac{4}{3}$ $\frac{7}{5}$ $\frac{10}{3}$ $\frac{9}{2}$

Mixed Numbers: Has a whole number and a fraction part

e.g. $3\frac{1}{4}$ $7\frac{2}{3}$ $10\frac{14}{15}$

Equivalent Fractions: Fractions that use different numbers but have the same value. e.g.

$$\frac{1}{2} = \frac{2}{4} = \frac{4}{8} = \frac{30}{60} = \frac{17}{34} = \frac{85}{170} = \frac{5}{10}$$

Simplest form: To get a fraction into its simplest form, divide the top and the bottom by any common factors. e.g.

$$\frac{90}{120} \xrightarrow{\div 10} \frac{9}{12} \xrightarrow{\div 3} \frac{3}{4} \leftarrow \text{Simplest form}$$

common factors

or

$$\frac{90}{120} \xrightarrow{\div 30} \frac{3}{4}$$

No common factors left

KEY SKILLS

Adding and Subtracting Fractions: Must have the same denominator

Step 4: Multiply each numerator by the same number.

Step 1: Find the LCM of 4 + 6

4, 8, 12, 16, 20, ...

6, 12, 18, 24, ...

Denominators not the same

Step 3: What have you multiplied each denominator by?

Step 2: Use the LCM to make the denominators of both fractions.

You can try a few:

① $\frac{1}{9} + \frac{2}{3}$

② $\frac{7}{10} - \frac{2}{5}$

③ $\frac{5}{12} + \frac{1}{8}$

④ $1 - \frac{2}{7}$

Finding a fraction of a quantity: Divide the quantity by the denominator and then multiply by the numerator.

eg $\frac{2}{3}$ of £45 $\rightarrow 45 \div 3 = 15 \rightarrow 15 \times 2 = \underline{\underline{£30}}$

You can try a few

① $\frac{3}{4}$ of 24

② $\frac{7}{8}$ of 40

③ $\frac{2}{5}$ of 25

ANSWERS: ① 18 ② 35 ③ 10

Billions			Millions			Thousands										
B	Hm	Tm	M	HTh	MTh	Th	H	T	U	.	$\frac{1}{10}$	$\frac{1}{100}$	$\frac{1}{1000}$	$\frac{1}{10000}$	$\frac{1}{100000}$	$\frac{1}{1000000}$
											0	6	5			

Converting decimals into fractions:

eg. $0.65 = \frac{65}{100} = \frac{13}{20}$ \leftarrow Leave your final answer in its simplest form

You can try a few:

① 0.24

② 0.8

(3) 0.02

(4) 0.35

(converting fractions into decimals: Find an equivalent fraction with a denominator of 100. $\frac{22}{50}$ (7) $\frac{25}{100}$ (8) $\frac{5}{10}$ (2) $\frac{25}{50}$ (1))

eg. $\frac{2}{5} \xrightarrow{\times 2} \frac{4}{10} \xrightarrow{\times 10} \frac{40}{100} = 0.40 = 0.4$ Bonus skill \downarrow also 40%

$$\frac{11}{25} \overset{\times 4}{=} \frac{44}{100} = 0.44 \text{ (and } 44\%)$$

You can try a few:

① $\frac{3}{5}$

$$\textcircled{2} \frac{9}{20}$$

$$\textcircled{3} \quad \frac{19}{50}$$

Converting percentages into fractions: Start as a fraction over 100.

eg. $71\% = \frac{71}{100}$ and $32\% = \frac{32}{100} = \frac{16}{50} = \frac{8}{25}$ ← Leave as simplest form.

You can try a few:

- ① 17% ② 64%

ANSWERS: ① $\frac{17}{100}$ ② $\frac{16}{25}$

Converting percentages to decimals: Divide by 100 ie two places down

eg $14\% = 14 \div 100 = 0.14$ and $30\% = 30 \div 100 = 0.3$

You can try a few:

- ① 23% ② 70%

ANSWERS: ① 0.23 ② 0.7

Converting decimals to percentages: Multiply by 100 ie two places up.

eg. $0.38 = 0.38 \times 100 = 38\%$ and $0.05 = 0.05 \times 100 = 5\%$
and $1.52 = 1.52 \times 100 = 152\%$ and $0.9 = 0.9 \times 100 = 90\%$

You can try a few:

- ① 0.47 ② 0.08
③ 2.08 ④ 0.1

ANSWERS: ① 47% ② 8% ③ 208% ④ 10%

← decimal equivalent of the percentage.

Using a multiplier to work out percentages of amounts:

eg To find 85% of 140 → $0.85 \times 140 = 119$ ← On your calculator!

You can try a few:

- ① 46% of 750 ② 3% of 8400

ANSWERS: ① 345 ② 252

Topic/Skill	Definition/Tips	Example
1. Probability	The likelihood/chance of something happening.	
2. Probability scale	<p>A scale expressed as a number between 0 (impossible) and 1 (certain). (0% - 100%)</p> <p>Can be expressed as a fraction, decimal, percentage or in words (likely, unlikely, even chance etc.).</p>	
3. Event and outcome	<p>Event is an activity</p> <p>Outcome is the actual result of that activity.</p>	Throw a 2 on a dice is event 1, 2, 3, 4, 5 and 6 are outcomes
4. Fair / bias	<p>Fair is not giving priority to one happening</p> <p>Bias is favouring one happening.</p>	A biased dice would come up more often with certain numbers than others.
5. Equally likely	Equally likely outcomes have the same probability of happening.	
6. Mutually Exclusive	<p>Events are mutually exclusive if they cannot happen at the same time.</p> <p>Outcomes are exhaustive if they cover the entire range of possible outcomes.</p> <p>Probabilities of an exhaustive set of mutually exclusive events adds up to 1.</p> <p>The probability of something not happening is 1 minus the probability that it does happen.</p>	<p>Examples of mutually exclusive events:</p> <ul style="list-style-type: none"> - Turning left and right - Heads and Tails on a coin <p>Example of non mutually exclusive events:</p> <ul style="list-style-type: none"> - King and Hearts from a deck of cards, because you can pick the King of Heart
7. Probability Notation	P(A) refers to the probability that outcome of the event is A .	P(Red Queen) refers to the probability of picking a Red Queen from a pack of cards.
8. Theoretical Probability	$\frac{\text{Number of Favourable Outcomes}}{\text{Total Number of Possible Outcomes}}$	Probability of rolling a 4 on a fair 6-sided dice is $P(4) = \frac{1}{6}$.
9. Trials	<p>Repeatedly doing the same thing.</p> <p>The probability is more accurate if there are many repetitions.</p>	Flipping a coin 50 times; more accurate if flipped 500 times
10. Experimental probability \equiv Relative Frequency	$\frac{\text{Number of Successful Trials}}{\text{Total Number of Trials}}$	<p>A coin is flipped 50 times and lands on Tails 29 times.</p> <p>The relative frequency of getting Tails = $\frac{29}{50}$.</p>
11. Expected Outcomes	To find the number of expected outcomes, multiply the probability by the number of trials .	<p>The probability that a football team wins is 0.2 How many games would you expect them to win out of 40?</p> <p>$0.2 \times 40 = 8 \text{ games}$</p>
12. Sample	A sample is a small selection of items from a population.	A sample could be selecting 10 students from a year group at school.
12. Sample Size	The larger a sample size, the closer those probabilities will be to the true probability	A sample size of 100 gives a more reliable result than a sample size of 10

13. Sample space	A diagram showing the set of all possible outcomes of an experiment, in a table	The outcomes from two mutually exclusive events are added <table><tr><td>+</td><td>1</td><td>2</td><td>3</td><td>4</td><td>5</td><td>6</td></tr><tr><td>1</td><td>2</td><td>3</td><td>4</td><td>5</td><td>6</td><td>7</td></tr><tr><td>2</td><td>3</td><td>4</td><td>5</td><td>6</td><td>7</td><td>8</td></tr><tr><td>3</td><td>4</td><td>5</td><td>6</td><td>7</td><td>8</td><td>9</td></tr><tr><td>4</td><td>5</td><td>6</td><td>7</td><td>8</td><td>9</td><td>10</td></tr><tr><td>5</td><td>6</td><td>7</td><td>8</td><td>9</td><td>10</td><td>11</td></tr><tr><td>6</td><td>7</td><td>8</td><td>9</td><td>10</td><td>11</td><td>12</td></tr></table>	+	1	2	3	4	5	6	1	2	3	4	5	6	7	2	3	4	5	6	7	8	3	4	5	6	7	8	9	4	5	6	7	8	9	10	5	6	7	8	9	10	11	6	7	8	9	10	11	12
+	1	2	3	4	5	6																																													
1	2	3	4	5	6	7																																													
2	3	4	5	6	7	8																																													
3	4	5	6	7	8	9																																													
4	5	6	7	8	9	10																																													
5	6	7	8	9	10	11																																													
6	7	8	9	10	11	12																																													
14. Frequency Tree	A diagram showing how information is categorised into various categories, and all possible outcomes The lines connected the numbers are called branches . The numbers at the ends of branches tells us how often something happened (frequency).	Frequencies of boys/girls in sample wearing/not wearing glasses <pre>graph LR Root(()) --- Boys Root --- Girls Boys --- B18((18)) B18 --- B18W10((Wears glasses 10)) B18 --- B18N8((Does not wear glasses 8)) Girls --- G8((8)) G8 --- G8W5((Wears glasses 5)) G8 --- G8N3((Does not wear glasses 3))</pre>																																																	
15. Probability tree diagram	A branched tree diagram showing all outcomes and all probabilities . The probabilities along the branches are multiplied , while the probabilities going down are added (give a total of 1)	Probabilities of picking a black disc or a white disc from a bag <table><tr><th>First draw</th><th>Second draw</th><th>Outcomes</th><th>Probability</th></tr><tr><td rowspan="2">B</td><td>B</td><td>(B, B)</td><td>$\frac{3}{10} \times \frac{2}{9} = \frac{6}{90} = \frac{2}{30}$</td></tr><tr><td>W</td><td>(B, W)</td><td>$\frac{3}{10} \times \frac{7}{9} = \frac{21}{90} = \frac{7}{30}$</td></tr><tr><td rowspan="2">W</td><td>B</td><td>(W, B)</td><td>$\frac{7}{10} \times \frac{3}{9} = \frac{21}{90} = \frac{7}{30}$</td></tr><tr><td>W</td><td>(W, W)</td><td>$\frac{7}{10} \times \frac{6}{9} = \frac{42}{90} = \frac{14}{30}$</td></tr></table>	First draw	Second draw	Outcomes	Probability	B	B	(B, B)	$\frac{3}{10} \times \frac{2}{9} = \frac{6}{90} = \frac{2}{30}$	W	(B, W)	$\frac{3}{10} \times \frac{7}{9} = \frac{21}{90} = \frac{7}{30}$	W	B	(W, B)	$\frac{7}{10} \times \frac{3}{9} = \frac{21}{90} = \frac{7}{30}$	W	(W, W)	$\frac{7}{10} \times \frac{6}{9} = \frac{42}{90} = \frac{14}{30}$																															
First draw	Second draw	Outcomes	Probability																																																
B	B	(B, B)	$\frac{3}{10} \times \frac{2}{9} = \frac{6}{90} = \frac{2}{30}$																																																
	W	(B, W)	$\frac{3}{10} \times \frac{7}{9} = \frac{21}{90} = \frac{7}{30}$																																																
W	B	(W, B)	$\frac{7}{10} \times \frac{3}{9} = \frac{21}{90} = \frac{7}{30}$																																																
	W	(W, W)	$\frac{7}{10} \times \frac{6}{9} = \frac{42}{90} = \frac{14}{30}$																																																

Try these ...

1. There are **three 5p** coins and **three 10p** coins in a bag. Amelita takes at random a coin from the bag.

- On the probability scale:
- Mark with the letter X the probability that Amelita takes a 5p coin.
 - Mark with the letter Y the probability that Amelita takes a coin with a value of less than 5p.

2. There are 5 **red** counters, 3 **yellow** counters and 1 **blue** counter in a bag. Harry takes at random a counter from the bag. Find the probability that the counter is

a) red b) not blue c) red or blue d) pink.

3. The probability that a spinner lands on blue is 0.4. Find the probability that it does not land on blue.
4. During the past 30 days Josh has missed his school bus on 4 of those days. Estimate the probability that Josh will miss his school bus tomorrow.

Topic/Skill	Definition/Tips	Example
1. Ratio	Ratio compares the size of one part to another part . Written using the ':' symbol.	$3 : 1$ 
2. Proportion	Proportion compares the size of one part to the size of the whole . Usually written as a fraction.	In a class with 13 boys and 9 girls, the proportion of boys is $\frac{13}{22}$ and the proportion of girls is $\frac{9}{22}$
3. Simplifying Ratios	Divide all parts of the ratio by a common factor .	$5 : 10 = 1 : 2$ (divide both by 5) $14 : 21 = 2 : 3$ (divide both by 7)
4. Connection between ratio and percentages	Add both parts of the ratio to get denominator . Then multiply by 100 to get the percentage .	$3 : 2$ $3/5 \times 100 = 60\%$ $2/5 \times 100 = 40\%$
5. Sharing in a Ratio	1. Add the total parts of the ratio. 2. Divide the amount to be shared by this value to find the value of one part. 3. Multiply this value by each part of the ratio. Use only if you know the total .	Share £60 in the ratio 3 : 2 $3 + 2 = 5$ $60 \div 5 = 12$ $3 \times 12 = 36, 2 \times 12 = 24$ £36 : £24
6. Proportional Reasoning	Comparing two things using multiplicative reasoning and applying this to a new situation. Identify one multiplicative link and use this to find missing quantities.	
7. Unitary Method	Finding the value of a single unit and then finding the necessary value by multiplying the single unit value.	3 cakes require 450g of sugar to make. Find how much sugar is needed to make 5 cakes. $3 \text{ cakes} = 450\text{g}$ So 1 cake = 150g (\div by 3) So 5 cakes = 750 g (\times by 5)
8. Ratio already shared	Find what one part of the ratio is worth using the unitary method .	Money was shared in the ratio 3:2:5 between Ann, Bob and Cat. Given that Bob had £16, found out the total amount of money shared. $\text{£}16 = 2 \text{ parts}$ So $\text{£}8 = 1 \text{ part}$ $3 + 2 + 5 = 10 \text{ parts, so } 8 \times 10 = \text{£}80$
9. Best Buys	Find the unit cost by dividing the price by the quantity . The lowest number is the best value.	8 cakes for $\text{£}1.28 \rightarrow 16\text{p}$ each (\div by 8) 13 cakes for $\text{£}2.05 \rightarrow 15.8\text{p}$ each (\div by 13) Pack of 13 cakes is best value.

Try these....

1. The total cost of 6 identical pens is £3
 - a) Work out the cost of 1 of these pens.
 - b) Work out the cost of 5 of these pens.

2. Bill makes toy trains and cars. For every train he makes 3 cars.

On Monday, he made 7 trains.

 - a) How many cars did he make?

On Tuesday, he made 27 cars.

 - b) How many trains did he make?

3. Write each of these ratios in its simplest form.
 - a) 4 : 12
 - b) 24 : 32

4. Carlton takes 10 shots in practice for a basketball game. He scores on 6 of these shots.

What proportion of his shots does he score?

Give your answer as a percentage.

5. There are 27 children in Mrs Rahkit's class. 12 of the children are boys.

Write the ratio number of boys : number of girls.

Give your answer in its simplest form.

6. Ahmad makes compost by mixing 0.5 kg of sand with 2 kg of peat.
 - a) Write the ratio of sand to peat. Give your answer in its simplest form.
 - b) What percentage of the compost is sand?

7. Ginny makes orange drink by mixing 2 parts squash with 7 parts water. She has 400 ml of squash.

How much orange drink can she make?

8. £240 is split into the ratio 5 : 3. What are the two amounts?
